

Recent Study Items

Recent Study Items are those items that have had anything performed on them from their associated Action Menu, other than delete (e.g. Study Item activation, selection of View, selection of Acquire, Add to Clipboard).

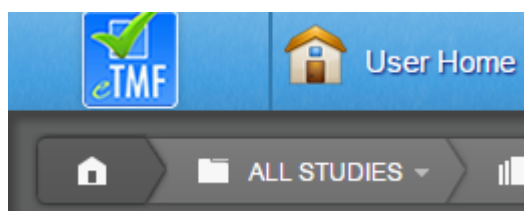

These studies can be accessed by selecting the Recent Study Items icon in the Contextual Header of the eTMF as shown below.

Selecting this icon opens the Recent Study Items List view page.

To see the recent study items for a specific study, select the **ALL STUDIES** dropdown menu and select the study that you would like to see the recent items for.

Study Items will no longer be considered "Recent" 90 days

after the last recorded study item access date.
