

# Manage SiteZone Templates

The Manage SiteZone Templates screen allows you to choose which templates you would like to use in SiteZone for various Document Types.

Users in the `MANAGE_SITEZONE_TEMPLATES` security group can access the 'Manage SiteZone Templates' option from the More Actions menu in the [Top Bar](#).

Templates created on the [View eTMF Configurations](#) screen will be available for use on the Manage SiteZone Templates screen if they apply to the document type that a template is being selected for.

The Reference Model ID for each Document Type is also displayed here.
